## Experiment : 03

### Web API for Restaurant system

Aim :

To create web API for Restaurant system.

Procedure :

\* open zoho application in your system / Laptop.

\* using your E-mail and phone number login into zoho.com.

\* After entering otp you can able to access zoho.com.

\* Select Creator from Home page

✓ \* on right top side click Solutions  
→ click Applications → click Scratch.

\* After click Scratch give name for your API (Restaurant complaint form).

\* You can use the given template or by yourself you can create new template.

\* On that screen there are many attributes like name, Address, Email, number etc...

\* According to your web API you can select and drag them into Screen.

\* For Restaurant system we can use Name, Address, Email, Date etc.. (selected to your topic).

\* After gave done, it will automatically save. Then we want to check whether the given input is right.

\* After that we can able to use that restaurant complaint form.

Result:

The given web API for Restaurant Complaint form is Successfully Executed.

Output:

## Restaurant Complaint form
